VOCABULARY

Habitat - a place where an animal or plant makes its home; includes food, water, shelter, space

Mammal - animals that are warm-blooded, have backbones, have hair and feed their young milk, such as lions, cows and giraffe

Bird - animals that are warm-blooded, have backbones, covered with feathers and lay eggs, such as flamingos, owls and hummingbirds

Reptile - animals that are cold-blooded, have backbones, covered in scales/scutes, such as alligators, turtles and snakes

Amphibian - animals that are cold-blooded, have backbones, go through metamorphosis where they start out with gills in water and then transition to land with lungs, such as toads and frogs

IN THE HABITAT

Draw a line from the animal to the habitat they live in.

Giant Anteater

Desert

American Alligator

Flamingo

Wetland

Giraffe
